

CASTOR analysis pipeline

α β

$n = \dots$

Question first · method second · report what you did not prove

1 Clinical question (one sentence) ?
What would change practice?

2 Estimand + population
Who · what contrast · when

3 Describe the sample
Table 1 · plots · missingness

4 Choose method
Outcome type + design

5 Fit model / test in R
Prespecified script

6 Diagnostics + sensitivity
Assumptions · MI · alternatives

7 Report estimate + 95% CI
 n · limitations · guidelines

8 State what was NOT proven
Stop — do not over-claim

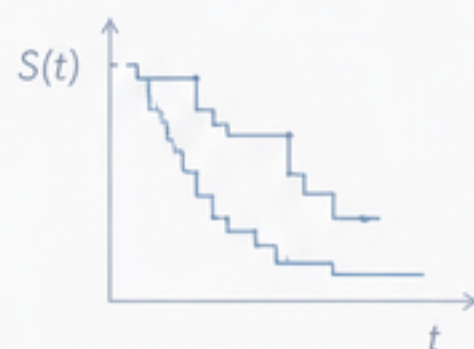

Prediction
(Ch 9)

Method decision tree
(Appendix B)

Omics / discovery
(Ch 13–17)

Longitudinal / survival
(Ch 18–19)

$$\hat{\beta} = \operatorname{argmin}_{\beta} \|y - X\beta\|_2^2$$

Estimand ≠ design?
→ return to steps 1–2

Full integration: Ch 12

HANDBOOK_GUIDE.md

CASTOR = teaching cohort
(simulated data)
